PROFESSIONAL SUMMARY

AI & ML undergraduate with hands-on experience developing computer vision, NLP, and voice-enabled AI applications using Python and PyTorch. Published research on an AI healthcare chatbot and experienced in building end-to-end AI systems from model development to deployment. Passionate about applied AI research and intelligent systems.

EDUCATION

Bachelor of Technology – Computer Science & Engineering (AI & ML) - Expected 2027

Sreyas Institute of Engineering and Technology, Hyderabad | **CGPA: 8.64 / 10.0**

TECHNICAL SKILLS

Programming Languages: Python (primary), Java, SQL

Frameworks & Libraries: PyTorch, OpenCV, Scikit-learn, Streamlit

Core AI Concepts: Machine Learning, Deep Learning, Computer Vision, Natural Language Processing (NLP), Speech Recognition

Tools & Platforms: VS Code, Jupyter Notebook, Google Cloud AI, SQLite

Software Engineering: Object-Oriented Programming (OOP), Data Structures & Algorithms, Database Management Systems (DBMS), REST APIs

PROJECTS

Edge AI-based violence detection system for intelligent surveillance Python | PyTorch | YOLOv8 | OpenCV | SQLite [github](#)

- Designed and benchmarked three 3D CNN architectures (R3D-18, MC3-18, R(2+1)D-18) on the RWF-2000 dataset for real-time violence detection; MC3-18 achieved 81% recall, selected as the production model for edge deployment.
- Integrated YOLOv8 person detection with temporal smoothing and optical flow motion analysis to reduce false positives; implemented SQLite-based alert logging for persistent event memory.
- Optimised inference pipeline for edge hardware constraints — reduced model size and clip duration without significant accuracy loss, shipping a deployable system end-to-end in PyTorch.

Sentiment Analysis of Product Reviews Python | NLP | Scikit-learn | Streamlit [github](#)

- Developed an NLP-based sentiment classification system using TF-IDF and Logistic Regression with an interactive Streamlit interface.
- Built the complete preprocessing, feature extraction, prediction, and deployment pipeline for product review classification.
- Managed the project using GitHub with iterative improvements and version control.

Medibot – Voice-Enabled Conversational AI (Research-Published) Python | NLP | Speech Recognition | ML [github](#)

- Developed a voice-enabled AI healthcare chatbot supporting symptom analysis, speech recognition, text-to-speech, and multilingual interaction.
- Published the project in the International Journal of Science and Technology (May 2025), presenting the chatbot architecture and NLP pipeline.
- Applied NLP techniques for symptom understanding and response generation while continuously improving the chatbot through iterative development.

Legal Rights Awareness Platform – AI-Enabled Web Application (IBM SkillsBuild) Python | Web Dev | AI Integration [github](#)

- Developed a web-based, AI-integrated platform during a structured five-day IBM SkillsBuild workshop; applied new technologies quickly in a team-based, sprint-style environment.

CERTIFICATIONS & ACHIEVEMENTS

- Python for Data Science – NPTEL Elite | March 2026
- Programming in Java – NPTEL Elite | April 2025
- Artificial Intelligence Fundamentals – IBM SkillsBuild | December 2025
- Google Student Ambassador – Google Gemini | December 2025
- Innovating with Google Cloud AI | April 2025
- TATA GenAI Data Analytics Job Simulation – Forage | July 2025
- Deloitte Technology Job Simulation – Forage | July 2025
- Research Publication: Medibot – International Journal of Science and Technology | May 2025
